Personal Portfolio Website

1. Project Overview

This project is a single-page personal portfolio website developed using HTML5 and CSS3. It introduces me, highlights my technical skills and projects, and provides a contact section.

The website is designed to present my background as a Computer Science student interested in programming, Artificial Intelligence, and Web Development.

2. Technologies Used

- **HTML5:** Used to create the structure and content of the website.
- **CSS3:** Used to style the website, including colors, layouts, spacing, and responsiveness.

3. Website Sections

The website contains the following sections:

1. **Navigation Bar:** Provides links to different sections of the website.
2. **Home Section:** Introduces me and displays my profile picture.
3. **About Me:** Provides a short introduction and background.
4. **Skills:** Displays my technical skills.
5. **Projects:** Showcases my academic and personal projects.
6. **Contact:** Contains a contact form for visitors.
7. **Footer:** Includes social media links and copyright information.

4. Project Structure

Portfolio/

├── index.html

├── style.css

  └── profile.jpeg

5. Features

- Clean and modern design.
- Navigation links to website sections.
- Circular profile picture.
- Skills and project presentation.
- Contact form layout.
- Responsive styling for different screen sizes.
- Hover effects and styled form fields.

6. How to Run the Project

1. Download or clone the project folder.
2. Open the folder in Visual Studio Code.
3. Open index.html.
4. Run the website using the Live Server extension or open the HTML file in a browser.

7. Conclusion

This project helped me understand how to structure a webpage using semantic HTML elements and style it using CSS. It also improved my understanding of layouts, Flexbox, Grid, forms, navigation, and responsive web design.
